

OPTIONAL EQUIPMENT
MOTORIZED AIR BLOWER
FOR ANTIRUST SYSTEM

MOTORIZED AIR BLOWER

MOTORIZED AIR BLOWER

As an alternative to the Air knife this is recommended for Antirust 12 system where the mill produces larger pipes/tubes or predominately profiles (also in the case of Antirust 08)

It allows drying of the tube/profile before the entry into the Antirust system, thus ensuring the rust preventive oil is applied to a 'dry' product in a more precise way.

MOTORIZED AIR BLOWER

Assembly comprises of a turbine system controlled by an industrial PLC independent from the main electric cabinet and connected to the HMI.

The turbine is connected to the blower system located at the mill distributing high pressure air to 4 blower manifolds, 2 of them horizontal and 2 of them vertical.

Power consumption: 7, 5 Kw
